EnSite USA

EnSiteUSA services the energy industry through our Project Management, Engineering, Design, Procurement, Survey, Mapping, GIS, Land and Right-Of-Way, Construction Management and Inspection Services.

BUNDLED EPCM SERVICES

Our one stop, turnkey solution can provide the project manager an efficient, experienced and holistic project delivery solution through the full life cycle of the project. We have the insight to ensure each phase of the project is executed with excellence and care.

INDEPENDENT SERVICES

EnSiteUSA can configure the standalone services needed to fill in your disciplinary gaps, from feasibility studies through project execution and ongoing maintenance and operations activities.

TECHNOLOGY SOLUTIONS

At EnSiteUSA, we are a technology-forward thinking company, that extends it naturally into our service offering while seamlessly interfacing with your platform preferences.

MAINTENANCE CAPITAL & MODERNIZATION PROGRAMS

Our experienced partnerships with multiple operating companies across the country provides a frame work and key experience in executing annual maintenance & modernization programs efficiently.

EPIC PORTAL

The EnSiteUSA Project Information Center (EPIC), drives efficiency and execution risk mitigation and reduction via real-time reporting and transparency. Every relevant data point is in one location, facilitating smooth end-to-end project communication and management. EPIC helps designated team members identify risks early to minimize costs and preserve schedules.

ANALYTICS & REPORTING

More than a repository, this powerful project compliance engine is a smart tool that can ensure technical adherence in the field along with project forecasting, key trends and analysis. This platform leverages Microsoft PowerBI to process and visualize the field data in a usable and intuitive format. EPIC also integrates with Primavera by Oracle, ArcMap by ESRI and Sharepoint-OneDrive by Microsoft to deliver the most powerful reporting capabilities in the industry.

FIELD DATA COLLECTION

EnSpect, the field quality control inspection application in EPIC, advances the data collection, reporting, archiving and analytics regarding construction to unparalleled levels. Instead of traditional paper or simple digitized forms, EnSpect uses advanced forms to populate integrated databases for collection of field data on critical material, construction processes, safety observations, personnel and equipment, etc., all time and date stamped and complete with geo-tagged images.
